

# Project Manager for New Business & New Products (Ref:HGR243)

**Salary: To £40,000 basic with bonus, pension & healthcare**

**Location: Milton Park, near Abingdon, Oxfordshire**

**Closing date : 1<sup>st</sup> Dec 2009**

## Can you think inside *and* outside our box?!

Established in Germany in 1969, the LTI Group is recognised as expert in precision metal forming and welding of components for many types of products. It prides itself on finding innovative solutions to customers' challenges where quality always takes priority. LTI Metaltech, based at Abingdon, currently specialises in the fabrication of cryogenic pressure vessels for use in MRI scanners for a key customer, Siemens. These high tech processes and techniques lend themselves extremely well to other applications so the company is actively expanding its customer base, developing new offerings for use in other areas.

As a result of this new activity, LTI has created a post for an experienced Project Manager who will lead critical prototype development projects. The role will entail scoping projects, developing costings and project plans for the fabrication of new products and preparing commercially-focused proposals. Your first challenge will be to establish a viable project management process for this new function which fully responds to the needs of customers, both external and internal. You will also have the opportunity to influence design concepts, ultimately taking full responsibility for the successful delivery of approved projects. The job brief will include staying abreast of industry and technical advancements, identifying, evaluating and recommending innovative technologies and/or processes which LTI should consider adopting. This position will ideally suit a time-served or graduate engineer with 7 years+ manufacturing experience, ideally in high end metals fabrication. A successful track record in engineering project management, especially around the development of new products or R & D would be particularly relevant as would be experience in coordinating internal and external specialist resources. Excellent communication and influencing skills will be needed to ensure the support and engagement of all project stake-holders. Working knowledge of Microsoft Project would be an advantage.

### Ideal skills and qualities for this Project Manager role will be:

- Output driven
- Energetic & enthusiastic
- Strong planner
- Effective resource manager
- Curious & innovative
- Commercially aware
- Influential relationship manager
- Calm under pressure!
